The Sanishower drain pump is used to pump gray water away from a variety of fixtures in residential applications. The system is able to discharge the waste up to 12 feet vertical and/or 100 feet horizontal.

- Discharges the waste through a 3/4” or 1” rigid pipe. A non-return valve is included on the discharge fitting assembly provided with the system. Unlike the other models, the discharge for this model is on the side of the enclosure.
- Has been designed to be vented through a 1–1/4” or 1–1/2” pipe. The vent output is located on the top of the pump. The case has a knockout which along with the rubber adapter provided is used to connect to the vent pipe. Note: The use of mechanical vents, air admittance valves or similar devices is not permitted.
- Discharges gray water from a shower or sink. The gray water will drain into the system via two 2” inlets (with built-in check valves) on either side of the housing.

Example of installation. Follow local plumbing codes for actual install.
